Angiogenesis is an essential component of various diseases, including liver cirrhosis. MicroRNAs are small noncoding RNAs that play an important role in the modulation of angiogenesis. The aim of this study was to investigate the expression and function of miR-23b-3p in cirrhosis. Real-time PCR was performed to detect the expression of miR-23b-3p in liver cirrhosis patients. The biological functions of miR-23b-3p were detected in vitro and in vivo. In vivo experiments revealed that miR-23b-3p is a potent angiogenic factor that promotes angiogenesis in cirrhotic patients. Furthermore, our data indicate that miR-23b-3p is closely associated with cirrhosis severity and the expression of miR-23b-3p could be used as a new biomarker to predict clinical outcome. Taken together, our data identify miR-23b-3p as a novel and potent angiogenic factor and potential biomarker of cirrhosis.08 -2.14 -0.98 Nellie Fox 1 7.57 2 0.87 -0.25 1.5 2 NHLA Staff, 1997 Nellie Fox 3 2.0 1 2.5 0.50 3.0 3 NHLA Staff, 1998 Nellie Fox 3 1.0 1 3.0 -0.50
