Rabbit Hx 1360 Driver 100

The first two versions of the HX series were the HX-1000 and HX-1120, which were introduced on 12/28/05. In April of that year the HX-1360 was also added to the portfolio. The HX series was created specifically for use with both standard and Heavy Duty cutters. Other features of the HX series include a wide variety of paper feed options as well as a V-Feed and a Parallel Feed. A number of web sites listed the following as features of the HX-1360: Cutting capacity of 6,000 A4/Letter (with in-feed) and 15,000 A4/Letter; Folding capacity of 5,000 A4/Letter; Lateral cutting accuracy. The web sites that listed this as the HX-1360's features included: For the HX-1360 the cutting ability was not a given. There were various references to the HX-1360 which were not specifically for the HX-1360. Also for the HX-1360 it was stated by several web sites, including the ones listed below, that the output would be cut to a specific size. HX-1360. Vistacraft.co.uk. Features The HX-1360 has been successful because it is very easy to set up and use. This cutter can cut up to 6,000 A4 size (8.5×11 inches) from the roll. This cutter also can cut 8.5x12 and 9x12 inches. The print bed can be raised or lowered and there is also a separate lid which allows the print bed to be lowered. The HX-1360 can also handle heavier weight paper. The maximum paper weight is 20 grams per square centimeter which is 1000 grams. V-Feed While other cutters can feed paper from the front, the HX-1360 was built with the feed in the middle of the machine. This allows the paper to be fed in from the side while being held in place. Because of this, the paper can be fed in with the machine on a nearly flat surface. Another advantage to this design is that it makes it much easier to transport the machine. This machine does require a larger base than the other cutters as the feed is in the middle. Other Cutter Options
