Jottacloud Shortcuts

Jottacloud's main interface is not very intuitive and not very user-friendly, which is a pity, given that it's one of the most feature-rich cloud backup utilities out there. If you install the application in a folder, you won't be able to find it until you start typing its name. The application is,

by default, a tray application, which means you can run it without seeing it in the Windows task bar. You can bring up the main interface by clicking the Jottacloud tray icon. However, you can't drag and drop files in the application window. Getting Started The first thing you need to do is to create a new Cloud Storage account for backing up your files. To do

that, just go to the application window and select "Create new account". Here, you can enter a username for the cloud service and a password for connecting to the website. You can also create a folder for storing your backup files on the cloud server. When you click Create Account, Jottacloud shows you a page with instructions. You can move on to the next step.
