AutoCAD [April-2022]

AutoCAD History AutoCAD is Autodesk's flagship software application, with over 25 million users, and is the world's most popular CAD software. The name "AutoCAD" is derived from the company's former brand name, AutoCAD, which was used to market its drawing software from 1982 to 1998. In January 2006, the company released the product AutoCAD R14, which was fully integrated with Inventor, a 3D design software, and was capable of working in both 2D and 3D modes, similar to a drawing and a 3D model, respectively. The name "AutoCAD" was adopted for the first time in 1998, and is now used exclusively to refer to the desktop application. AutoCAD R14 was the last version of AutoCAD to use the AutoCAD brand name. AutoCAD was released in its current form on June 20, 2012, with version 2016. AutoCAD is a full-featured 2D and 3D vector drawing and drafting application for desktop and mobile computing systems. It has become popular for use in architecture, civil engineering, engineering and manufacturing. AutoCAD has been widely used by architects, engineers, drafters, hobbyists, and students. The company's client base now includes companies and individuals from more than 140 countries. A key development in the software is the introduction of a cloud architecture, allowing users to make changes to a project while connected to a network, and publishing their changes on the cloud. The cloud architecture was introduced in 2008, although AutoCAD has been able to connect to the cloud since the release of AutoCAD 2004. AutoCAD uses components such as vector objects, 3D objects, layout, and drawing. The application provides tools that are useful for sketching and drafting as well as standard drafting operations such as linework, curved and section lines, and arcs. Vector drawing, which is the ability to create two- and three-dimensional drawings, is the most popular feature of AutoCAD, and is why the software has been so successful. In 2012, AutoCAD 2016 was released. It features redesigned tools and interfaces to make it easier to work with. AutoCAD 2016 has been referred to by some as "AutoCAD for everybody" due to its lighter-weight interfaces and faster speed. AutoCAD 2016, together with AutoCAD LT and AutoCAD Map 3D, is the first release of the AutoCAD product line to feature cloud connectivity.

Q: How to return list of items from JQuery post call in other JS file? I want to return a list of items from a post call. I have the following code, which returns an array of objects in the onComplete function in the AJAX call. However, I can't access that array in the other script file, so my list never gets populated. Is this possible?

```
$.post(uri, { "action": "get_json", "start": start, "end": end }, function (result) { var items = result.data.data; list = items.map(function (obj) { return { "id": obj.id, "name": obj.name, "price
```
