Assessment of the neurotoxicity of native and natural products from plants (Guava, Eucalyptus, Lychee and Mandevilla) on the enzyme acetylcholinesterase, using molecular docking studies. The acetylcholinesterase (AChE) enzyme is a well-known therapeutic target in the treatment of various neurodegenerative diseases, as this enzyme is involved in the function of cholinergic synapses. Several synthetic drugs can also inhibit this enzyme by mimicking the cholinergic neurotransmitter. However, concerns over the side effects and cross-reactivities of these synthetic drugs has lead to the search for natural inhibitors that present a promising alternative. Here, we assess the inhibition of AChE by plants (Eucalyptus, Lychee, Guava, Mandevilla) and their essential oils. The inhibition assays were performed using human AChE with eserine as a positive control. All plant and essential oil extracts inhibited AChE, but only two extracts inhibited more than 50% of AChE: aqueous extracts of essential oils of the Lychee and Guava fruits, and an aqueous extract of Mandevilla essential oil. The inhibition of the enzyme was not due to the direct action of the compounds but it was suggested to be due to the synergism of the extracts' active principles. The compounds from which these extracts derived, were analyzed by chromatographic and mass spectrometric techniques. From the chemical analyses, it was concluded that the inhibitory effects of the extracts of the four fruits were due to the antioxidant and metal chelating properties of the compounds found in the essential oils.Q: Show that $S(a,b) = (a, \frac{b}{|b|})$ Show that $S(a,b) \in \text{mathbb R}^2$ is a vector space with operations: $S(a,b) + (c,d) = (a+c, b+d)$ $\text{quad}(a,b) \times (c,d) = (ac-bd, ad+bc)$, S If $S(a,b) = (a, \frac{b}{|b|})$ then $S(a,b)$ is a vector space with operations. I don't see how I can expand $S(a, \frac{b}{|b|}) + (c, \frac{d}{|d|}) = \text{left}(\frac{a}{|a|} + \frac{c}{|c|}, \frac{b}{|b|} + \frac{d}{|d|})$
