The cytotoxic and cytostatic effects of pulsed microwave radiation (PMR) on human lymphocytes (HL) were studied using the

MTT assay and a 51Cr-release assay. PMR was given at the same time with or immediately before mitogen stimulation. PMR at 4 or 8 W/cm2 for 5 min. given either before or simultaneously with Concanavalin A (Con A) stimulation, was found to inhibit the growth of HL. However, PMR at 4 or 8 W/cm2 for 5 min. given 6 h before Con A stimulation, did not inhibit the proliferative response of HL. PMR at 4 or 8 W/cm2 for 5 min.

given simultaneously with Con A stimulation, resulted in an inhibition of the proliferative response, and PMR at 8 W/cm2 for 5 min. given immediately before Con A stimulation, resulted in an inhibition of the proliferative response. The magnitude of this inhibition was found to depend on the timing of the PMR treatment.Seven sites will be selected by the Anti-Defamation League (ADL) for its 2015 Atlas of Jewish

Communities in the United States, a publication which provides a richly detailed survey of Jewish population trends and Jewish communities throughout the U.S. It is the first report of its kind to include data on American Jews for more than 50 years, and it is among the only examples of a national data set of its kind. The Atlas of Jewish Communities in the United States will serve as a key resource for academics and the public alike.

The ADL has already released an interactive web app that lets visitors explore the data in the Atlas as well as regional demographic and religious data. The report will provide a comprehensive picture of the American Jewish population, including its ethnic, demographic and a1d647c40b
