while training the future of the journalism industry. Consider making a donation to support the coverage that shapes the face of Berkeley. UC Berkeley's latest freshman class is facing what some students call the worst class of their academic lives. In recent weeks, a group of fifth-year students who signed up for the Haas School of Business plan to form a new student organization to take a stand against the Student Advisory Committee, which is made up of Haas students and uses its power to pressure students in financial difficulty. For many of the new Haas Business School freshmen, the SAC has been, at best, an annoyance. The committee regulates campus clubs and clubs' fundraising efforts. It created a division in the Dean's Office, which, in return for money and resources, keeps SAC members in mind when creating and revising new rules and programs. The SAC's existence is somewhat obscure. In a questionnaire about potential financial trouble that is sent to students before freshman orientation, no mention is made of the SAC or of its current status. However, a few weeks into orientation, students are made aware of the SAC's importance when they are informed that the school has no deans, and that the Vice Chancellor for Student Affairs, Ronald Newman, is the only faculty member with any authority. Students are then informed that the SAC approves clubs, event planning, fundra 5b5f913d15

Go to the window menu > preferences. Find and make sure you are on the "Import" tab. On the "Import" tab, find "Open workspaces from a file". Now go back to the preferences window and click "Import". After importing a file, go to the "Open workspace" tab and Click "Browse". Go back to the previous menu, to where it says "Import" and Find the imported workspace in the window and click "Open". It should open a new workspace. You can also import your.opencad.cad or.gcode files. Guttud I'm not usually one for these kinds of stories, but I had to share this from an article in Today's Bee. It's about a couple from Canada who have made love 20 times in the last month to pay for their daughter's treatment. Cheryl Johnston, of Brampton, Ontario, told the Toronto Star that when she had four kids, she saved a few bucks to send them to summer camp and "maybe get a decent meal." But not this time. "If I wanted to live at home for the rest of my life and pay my taxes, I was going to need some help." So Johnston and her husband have been having sex in their apartment 20 times a month to raise \$34,000. The couple is willing to continue this streak until their daughter, Amy, turns 18. When the money runs out, they'll have sex for free until the girl gets her transplant. "The idea was to just commit to the bond we have with Amy and just spend every possible moment we could spend with her," she told the Toronto Star. "It's so fulfilling to know that I am providing for her to go to the best of her ability." This, of course, seems so wrong to me. How can you take what should be a sacred and personal act and make it into a business? You're selling sex, not butter. I'm not a prude, but this seems like a bigger issue than you would think. I mean, I guess if you're married to the woman you're paying, that's just the price of admission. But I'd rather not have this be something I

Quickly add value based feedback to parts and assemblies by converting a symbol (e.g., part number) to a floating point value (e.g., cost or profit) using "printable" symbols that already exist in your drawing. (video: 1:33 min.) Use the new "Markup Assist" to automatically "tag" points or holes that you want to update based on their location. Once "tagged," you can easily select the points and holes to update. You can also easily update multiple points or holes at once. (video: 1:52 min.) Note: Importing or creating symbols that are already in your drawings is called "markup." New commands: ARCED – draw arcs based on a point, circle center, or line (e.g., cadastre) (video: 5:34 min.) CO – customize objects and drawings so that you can work and view them the way you like (video: 6:16 min.) E – import and export drawings and drawings with document management options (video: 1:35 min.) EXPERT – control your drawings and access tools using the same keyboard shortcuts as in other drawing programs (video: 4:14 min.) ES – export to vector formats (e.g., shape formats, DWF, DXF) (video: 7:40 min.) EULER – calculate the total distance of an arc or polyline (video: 5:01 min.) F – modify (add or remove) points, lines, or polygons in edit and live views (video: 5:06 min.) IC – use interactive drawing to dynamically change attributes on all parts (video: 4:43 min.) INCLUDE – import AutoCAD graphics (.AGS) into the drawing (video: 2:03 min.) INCH – read and write.INCH (in-chassis) files (video: 2:39 min.) ISROLL – use the drawing tools in a single screen, with no panels to slide or scroll (video: 1:52 min.) K – use a knowledge-base feature for AutoCAD to store drawing, annotations, and your own defined objects (video: 2:03 min.)
