Mouse Tool is a Microsoft Office add-in to configure a Microsoft Office toolbar to perform various mouse operations. Mouse Tool is especially useful for copy, cut, paste, drag, delete, print, undo and redo, and other standard mouse operations. It can also increase or decrease the size of text and resize the whole text area to fit the text area. It is intended for desktop use.

A: I had same issue on my ubuntu 14.04, and the solution was this. Update the correct drivers for your PC. for me i was using generic / radeon / radeon_legacy and AMD Radeon HD 6750M 1GB Graphics and it worked fine on that driver. for more info :

Q: Combining Error Function and Binomial I was wondering how the error function of the binomial distribution can be integrated. I know that $E(X) = \sum Xp_i/n = 1/n$ and hence $p_i = nE(X)$. I was wondering if the equation $E(X) = \sum Xp_i/n$ is valid? If so, can we use this equation to combine the error function with a binomial distribution? The question is to find the minimum number of trials required to make the expected error of a binomial distribution less than a certain value (α) with N trials. I thought that $N = 1/p = 1/nE(X)$ and $E(X) = 1/n$ and hence $N = 1/p = \frac{1}{nE(X)}$ and hence $nE(X) = 1$ but this is obviously wrong.

A: The answer is $E[X] = \sum x_i/n = 1/n$ The question is to find the minimum number of trials required to make the expected error of a binomial distribution less than a certain value We'll take the error function to be α . This is a constant, and thus independent of the event. α
