When to use a brush: Have a brush size that matches the size of your object. Avoid using a very small brush when working with very large areas. In other words, use a large brush for large areas and a smaller brush for smaller details. Apply colors to your image that match the colors in your strokes. Do not overexpose your image. If your image is overexposed, you should use a different color or change your exposure compensation setting. Avoid using a brush size that is too large. Start with the size that gives you the best results. As you become more experienced, you can adjust your brush size to your desired result. If you brush on a colored background, check to see if your color is working to your advantage or your disadvantage. You should not use a color that clashes with the color of your subject. New brushes and creative new effects are frequently added to Photoshop every year. The brushes that come with Photoshop are only a starting point for creating new effects. Use the Mac or PC version of Photoshop depending on your operating system preference. For more on switching between the two, see Book I, Chapter 4. Photoshop also comes with various effects, which you can apply to either a single layer or the entire image. You can use them to change the way your image looks. To apply an effect to an image, right-click the layer (Image, Layers, and Effects Panels) to open the layer menu. From there, choose an effect. Effects help you create some special effects to add interest or change your image. Effects include the following: Reduce: Reduces the image to a small size. Chrome: Enhances the color of the image. Shapes: Creates geometric shapes. Lighting Effects: Improves the overall light in an image. Blur: Blurs the edges of the image, making the image smoother. Hue: Adds color to the image. Saturation: Changes the overall color of the image, causing it to appear more vivid. Vignette: Increases or decreases the light falloff at the edges of an image. Distortion: Adds distortion effects to an image. Opacity: Places an object on your image. When a paintbrush is used with a transparency mask, it draws an object inside the shape or clip path.
