The.The Jackass The Jackass 1 min read In this tutorial, you are going to learn how to make a very unique and realistic looking river at Daz Studio. Step 1 - Open a new scene in DS, you will be doing the majority of the work on a low resolution 512x512 scene as this will give you a good sense of the scale of your River. Step 2 - Import the River_01.png resource into the scene and position it correctly. You will be adding in the tiled floor and I will show you how to make that in a second. Step 3 - Add a plane to the scene and call it 'Ground', texture it and give it a gradient like the photo below. Step 4 - Duplicate the plane and make it 500x500 in size, call the duplicate 'Water'. Step 5 - Select the ground plane and the water plane and enter the following into the transform gizmo (shortcuts will appear as you type):

R.16,6.7,7.3,7.3,16,0.0,-19.8,7.0,-0.2,29.8,-0.2,16,0.0,4.4,0.0,0.0,0.0,1.0,0.0;

Fluorescence correlation spectroscopy (FCS) is a widely used tool to quantify the spatiotemporal dynamics of proteins, lipids, and other molecules. Because FCS requires two time-correlated photon detections at different wavelengths (first in the autofluorescence of the medium and then in fluorescent dyes), a laser light source needs to be split into two paths. This is typically done with a beam splitter, and the theoretical consideration of the fluorescence diffusion in the presence of such a mirror is usually performed based on the Gouy-Chapman model. In this work we demonstrate how two-photon interference, which results in an all-optical path length mismatch, can be used to confine the fluorescence within a submicrometer volume with the same efficiency as a beam splitter. In addition, we evaluate the non-Gaussian nature of the resulting fluorescence fluctuations and show that they provide a measurable change in the FCS parameters. Finally, we demonstrate how the probabilistic nature of the second-order correlation function and the need for dual-wavelength excitation cause a two-photon interference pattern that is not expected in the case of a beam-splitter-based FCS.
