Photoshop's extensive support library of image-manipulation tools and plugins is what makes it especially valuable for web designers and developers who use it to enhance a variety of digital images. Some image tools, such as the Create Clone Stamp tool, are provided in the Print and Web editions as well as in Photoshop itself. Photoshop is the most widespread tool that image editors use to manipulate raster images; however, it is not the only one available. How It Works Photoshop has been a driving force in the transformation of the graphics industry for well over a decade. Photoshop is designed to be used through a command line interface, but many of the tools and features can be accessed through a standard Windows Graphical User Interface (GUI), and many third-party tools are available for use with Photoshop. The basic idea of Photoshop is that you can group many layers into a single file and then apply numerous adjustments and operations to an entire image as one single file. Layers are simply a way to divide up an image into smaller parts and to allow you to view and edit each layer individually. To apply a filter to an entire layer, you need to enable the Layer Mask feature. This allows you to be selective about which parts of the image you want to apply the filter to. Then you specify which filter you want to apply, and Photoshop places the specified filter on the entire layer. With every change in the filter, the layer masks are updated automatically. Photoshop's various features are designed to work together and be layered in this way, and when you create a new document in Photoshop, it automatically creates one or more layers and gives you options for creating and using Layers. Also, the folder structure that you're familiar with on your hard drive remains with Photoshop — so when you save an image in Photoshop, all of the image's layers remain together in your existing file structure, and you can either save the image as a new file or open it up in the same folder structure as the original file. Photoshop has a wide variety of tools and features, and even though Photoshop's interface may look a bit daunting at first, it has a lot of power when you know how to use it. With just a few simple steps, you can achieve some amazing results. Benefits of working with layers Of all the features of Photoshop, the most impressive feature is the ability to create an entire image as a series of layers. Layers are the key to almost everything that you do

The truth is that politicians don't like taxes. It feels too much like theft for them to do anything about it. I'm not sure why. It doesn't feel like theft because it's so common. We all pay our taxes. Each one of us can see it on our pay stubs and each time we get a bill at the end of the month, we have to pay taxes on the part of the bill that wasn't paid by the government. It feels perfectly natural to me. But politicians don't feel comfortable with taxes because in general, the people they're elected to represent are suspicious of taxes. Who are they, they ask, to raise my taxes? Who are they, really, to ask me for anything? Therefore, in order to get elected, politicians must make themselves appear to be more in sympathy with the common person than they really are. They must give the impression that they will keep taxes low, and that they will spend the revenue carefully. That is the primary purpose of all the spending programs that make up our federal budget. They aren't there to do anything meaningful about poverty. They're there to make politicians feel good about themselves. This is why only 2% of the federal budget goes to cancer research, compared to all the money we spend on the military. It's not because we have enough food for everyone, or that we need the military. It's just the easiest way to fool the people, so that they'll vote for more spending. Politicians aren't stupid. They realize that they cannot pass a bill requiring corporations to pay their fair share of taxes. But they are also smart enough to know that they can attract our sympathy by offering tax relief for the average middle-class taxpayer. What if the government were to pass a law requiring that corporations pay their taxes, and that all business profits be paid out as salary? That would get our attention. There would be much more public outcry about corporate greed, and not just from the few politicians who think of it as the common man's tool. Instead of eliminating corporate tax loopholes, we need to eliminate all loopholes. Our federal government should not be handing special tax breaks to any particular company, no matter how large they are or how unfairly they make use of the system. There is a certain amount of pain that is inevitable in trying to recapture a portion of our taxes that are currently being wasted on corporate and military spending. But the great majority of people
